

# VALIDATION SERVICES

# Validation Services

## Validation

/valɪˈdeɪʃ(ə)n/

*noun*

the action of making something officially or legally acceptable or approved

Link Lab validation Services can accommodate your needs with accurate and reliable measurements of your laboratory and process equipment.

Our experienced engineers , along with calibrated equipment and guidelines according to global standards, will sample your laboratory thoroughly and provide you with accurate reporting, reflecting the technical competence and excellence of your equipment.

This will minimize the risk of granting a faulty product , service or material and frame quality expectations. In addition re-testing cost is minimized protecting the reputation of the brand, enhancing the producer's confidence and give an added value by third party validation assessment as independent evidence.

Accredited Laboratories penetrate overseas markets more easily and are accepted widely because of international recognition of validation. Re-testing in the importing countries is no longer necessary.

Link Lab Validation Lab provides services

- Validations according to ISO 17025
